

Jeesperse® CPW®-BC Cold Process Wax Technology

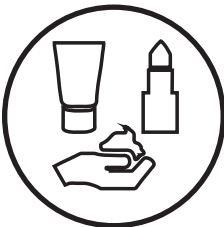

Theobroma Cacao (Cocoa) Seed Butter (and) Yellow Beeswax (and) Sodium Polyacrylate

Jeesperse® CPW-BC is a *patented** cationic emulsifier in a simple to use free-flowing powder, specifically created to prepare a wide array of stable emulsions. **Jeesperse® CPW-BC** will thicken oil and water phases simultaneously. The beeswax will aid in film forming, substantivity and conditioning properties as well as aid in emulsion stability. Being comprised of a natural wax which easily disperses in water, this unique blend allows you to add waxes to water without heating. The water absorbing properties of the sodium polyacrylate allows for the development of very unique textures in your finished formulations. **Jeesperse® CPW-BC** allows you to elevate your emulsions while incorporating a natural wax into your formulations. It's a synergy you can see and feel.

KEY BENEFITS:

- Improves stability
- Hydrates quickly
- Enhances textures
- Thickens and improves development of colors
- Cold Process Wax
- Changes the texture and feel of your product
- Natural Wax

PRODUCT APPLICATIONS:

- All types of emulsions
- Color cosmetics
- Skin care from a lotion to a soufflé-like texture

Typical Properties	
Appearance	White to light tan powder
Melting point, °C	45 - 65
Recommended use levels	1 - 15%

**US Patent No. 8,299,162 and other patents pending*
