

Jeesperse® CPW®-P
Cold Process Wax Technology
Cetearyl Alcohol (and) Sodium Polyacrylate (and) Polysorbate 60

Jeesperse® CPW-P is a *patented** emulsifier in a simple to use free-flowing powder, specifically created to prepare a wide array of stable emulsions. A natural wax which disperses in water, the beeswax will aid in film forming, substantivity, conditioning properties and emulsion stability. This unique blend allows you to add waxes to water without heating. The water-absorbing properties of the sodium polyacrylate allows for the development of very unique textures.

Jeesperse® CPW-P uses a mid-range molecular weight polyethylene that provides a creamy base to support all of your formulating ideas. By using **Jeesperse® CPW-P** in your formulations, you can develop hydrogels that can be used as the base for skin care and cosmetic products.
