Skin and Eye Contact:	TWA) for respirable dust: 5 mg/m ³ . Total nuisance dust OSHA PEL-TWA: 15 mg/m ³ ; total dust ACGIH TLV-TA: 10 mg/m ³ . If heated to decomposition, fumes generated may result in respiratory irritation. ACGIH exposure limit for paraffin wax fume is a TLV-TWA of 2 mg/m ³ .
Ingestion:	Not expected to be a problem under normal conditions of use. May produce mild irritation on prolonged contact with skin or eyes. Not expected to be absorbed through the skin in significant quantities. The cool solid material is not expected to cause skin or eye irritation; however, contact with molten material may result in thermal burns.
Emergency and First Aid Procedures:	May be harmful if swallowed. May cause gastrointestinal disturbances. Wash skin thoroughly with soap and water. Launder clothing before reuse. If in eyes, irrigate with flowing water immediately and continuously for fifteen minutes. Consult a physician. If inhaled, remove to fresh air and administer oxygen if necessary. If ingested, consult a physician. If molten polymer gets on skin, cool rapidly with cold water. Do not attempt to peel polymer from skin. Obtain medical attention for thermal burns.

SECTION 5 – FIRE FIGHTING MEASURES

5.1 Flash Point	> 350°F (> 175 °C)
5.2 Flammable Limits	Not available
5.3 Flash Method	COC ASTM D-92
5.4 Extinguishing Media	Use water spray or fog, alcohol-type foam, dry chemical, or CO ₂ .
5.5 Fire Fighting Procedures	Use a self-contained breathing apparatus with full face piece operate in pressure-demand or other positive pressure mode. Non-flammable. Keep fire-exposed containers cool using water spray.
5.6 Unusual Fire and Explosion Hazards	When finely divided and suspended in air, this product could be flammable. Under these circumstances, keep away from heat, sparks and open flames. Use adequate ventilation and ground all equipment. As with most solid or particulate organic materials, extremely high dust concentration in air may result in a potential explosion hazard. Use good housekeeping to prevent significant solids accumulation.

SECTION 7 – HANDLING AND STORAGE

7.1 Precautions for Safe Handling and Storage

Packaged material (boxes, bags) should be stored in conditions that avoid extremes of temperature. The shelf life of the products depends on storage conditions and intended uses; properties such as melting point, viscosity, and penetration will remain stable for over one year. The color of the products, especially white waxes, may darken slightly after two or three months under certain conditions. Care must be taken to avoid overheating the molten wax and causing oxidation of the product. Care must be taken to avoid overheating the molten wax and causing oxidation of the product. Care must also be taken to avoid skin contact with the molten wax, which will cause thermal burns. Good hygiene practices should always be followed when handling the material.

SECTION 8 – EXPOSURE CONTROLS / PERSONAL PROTECTION

8.1 Personal Protective Equipment

Respiratory Protection:

Respirator use is not expected to be necessary under normal conditions of handling. In emergency situations, use of a NIOSH-approved respirator may be required.

Ventilation:

General ventilation should be provided to maintain ambient concentrations below nuisance levels.

Protective Clothing:

Chemical-resistant gloves and chemical goggles should be used to prevent skin and eye contact.
